The following piece of CSS code displays only horizontal scrollbars for a fixed layer:

```
.myScrollingDiv{  
  height: 400px;  
  width: 400px;  
  overflow: -moz-scrollbars-vertical;  
  overflow-x: none;  
  overflow-y: auto;  
}
```

Usage in HTML:

```
<div class="myScrollingDiv">...</div>
```

The major disadvantage of this is, that firefox will now always display a vertical scrollbar.
