I've been getting an annoying error when starting Mozilla Firefox or Mozilla Thunderbird lately. The error message (Annoying "one or more files could not be updated" error) indicates that one or more firefox or thunderbird updates were not completed correctly.

This is because the update process was started from a non-administrator user on Windows.

To get rid of the error, simply execute the following two commando's:

```
del /f /q /s "%userprofile%\Local Settings\Application Data\Thunderbird\Mozilla Thunderbird\updates"
```

```
del /f /q /s "%userprofile%\Local Settings\Application Data\Mozilla\Firefox\Mozilla Firefox\updates"
```

After this the errors will be gone...
